

A LITTLE PROJECT WITH KIDS WHO KEEP GETTING BIGGER

How about a tree, a flower or even a rocket? If you want more than just a simple line on the door frame, you can monitor your kid's growth in a much more unique way. These imaginatively designed wall stickers make it fun to marvel every day at the stages of your child's growth. After a bit of handy craft work, all you need is an easy-to-operate laser measure to record your child's current height to the millimetre in no time.

BOSCH

Invented for life

MATERIAL LIST

Easy

Approx. 2 hours plus
time of shopping for
materials

- ▶ Glue stick for gluing the template
- ▶ Pen or pencil for transferring to the felt
- ▶ Self-adhesive felt in various different colours (180 x 120 cm)
- ▶ Scissors for cutting out the felt
- ▶ Squeegee for applying the felt to the wall

Tool list

- ▶ Zamo laser measure from Bosch

Scan the QR Code or download templates at www.bosch-zamo.com and print out the required motif.

STEP 1

Before you get started, first pick out one of the templates, download it using the QR Code and print it out. Cut the individual DIN A4 pages so that the right-hand margin and the upper white margin in each printout on the left. They will be used as adhesive strips. Coat the margins using the glue stick and then glue together the pages on the right-hand and top margins according to their numbering system. Now cut off all white areas so that only the grey design is left.

Note: For increased stability, print the template on thicker paper (100 g/m²).

STEP 2

The next step is to lay out the self-adhesive felt on a large table or on the floor. Make sure that the side with the peel-off film is on the top. Place the template you made in step 1 on the film and trace the edges with a pen or pencil to transfer the design onto the felt.

Tip: To create a unique look, transfer the tree leaves, which will be used as growth markers, onto different-coloured felt.

STEP 3

Now it's time to divide up the work. While mum and dad cut out the large basic design on the felt, the kids help to cut the leaves which can be used for marking the different stages of growth and for decorating the tree.

STEP 4

Almost done. To keep a record of childhood stories, first affix the cut-out felt design to the wall. To do so, hold the felt up with the adhesive film facing the wall and slowly apply the adhesive film from the bottom upwards. Smooth down the felt bit by bit with a squeegee to ensure that it is applied neatly to the wall.

STEP 5

How big am I? To obtain an exact measuring result, simply place a book above your child's head, place the Zamo laser measure from Bosch against the wall at the bottom of the book, hold it steady and press the button to measure. Write the size and date shown on the display on one of the prepared leaves and glue it to the corresponding position on the tree. If you want, you can also fill the leaves with little keywords specifying the important events in that growth phase. This creative wall sticker will then grow with your child and end up telling its very own story.
