

Drilling without dust

Procedure:

Dust-free drilling with simple means

In this way, you can prevent drilling dust from spreading all over the entire room with simple means.

- 1 Special dust extraction devices, which collect the dust during drilling, are available as accessories for impact drills.
- 2 Alternatively, you can also stick a small bag directly underneath the hole you are drilling, in order to collect the drilling dust. You should also cover the floor underneath the hole with cardboard or foil.
